

Energy UK has published the results of the Safety Net audit for the second year running. The commitment to publish the results reflects the increasing priority Energy UK members place on protecting their most vulnerable customers.

The 2016 results of the Safety Net audit show five suppliers attained the highest 'Gold' award and one other achieved Silver. This proves the significant efforts companies have made to conform to the Safety Net pledge. Compared to 2014/15 results, compliance has improved as a result of the implementation of last year's audit. There were no instances of non-compliance.

A breakdown of what each classification means is provided in appendix one below.

Results

Award	Number of suppliers	Suppliers
Gold	5	SSE, Scottish Power, British Gas, EDF, E.ON,
Silver	1	npower
Bronze	0	n/a

Dave Reeman, PwC said:

"PwC undertook a robust review of the processes and controls in place at each member to assess their ability to comply with The Safety Net code. We are pleased to see that, similar to the Billing Code, the members have taken the decision to continue to publish their compliance results from The Safety Net audits. This demonstrates the importance with which participating members view The Safety Net and their desire for more in the industry to sign up to its principles. This was reflected in the positive attitude with which all suppliers supported the audit process, and the results demonstrate their commitment to ensuring that all vulnerable customers receive an appropriate level of support."

Lawrence Slade, Chief Executive of Energy UK said:

"It is fantastic news that the number of suppliers achieving the gold standard has more than doubled, clearly demonstrating the industry's commitment to protecting vulnerable customers. A challenge for the industry will be to continue to build on this positive start and expand the number of suppliers who are signed up to the Safety Net, including smaller or medium suppliers as their market share increases."

Performance

Participating energy suppliers are judged against 13 key Safety Net objectives:

- **Communication of the Safety Net principles**

Ensure all business functions, both internal and external, who may have contact with vulnerable customers, are aware of the provisions of the Safety Net.

- **Policies & procedures**

Apply the agreed definition of vulnerability within a framework of best practice guidance.

- **Specialist teams**

Have specialist teams to assist vulnerable customers and support the implementation and ongoing administration of vulnerable customer policies.

- **Additional Safety Net Provisions**

This includes, a customer being added to the Priority Services Register (PSR) or the use of external Debt Advice Agencies.

- **Domestic consumers with a non-domestic supply**

This identifies suppliers implementing the required systems and processes to ensure vulnerable consumers whose domestic household makes use of a non-domestic supply (including dual usage and where the meter is in a third party property) are not disconnected for reasons outside of their control.

- **Disconnection**

Never knowingly disconnecting a vulnerable customer at any time of year, where for reasons of age, health, disability or severe financial insecurity, that customer is unable to safeguard their personal welfare or the personal welfare of other members of the household.

- **Post-Disconnection**

Make attempts to contact all customers following a disconnection with the aim of agreeing a repayment plan with the customer.

- **Approval of disconnections**

Obtain senior management authorisation prior to any disconnection.

- **Reconnections**

Reconnect any customer who has been found to be vulnerable after disconnection as a priority, and within 24 hours of confirming that the customer is vulnerable.

- **Repayment arrangements**

Monitor any repayment arrangements after set up, in line with Ofgem's Key Principles for ability to pay.

- **Debt repayment options**

Offer a range of debt repayment options in order to find the most appropriate solution for vulnerable customers to manage any debt.

- **Advice/support agencies**

Work, where appropriate, with advice agencies, support services and charities to offer vulnerable customers the most suitable support to help with their energy debt.

- **Vulnerability flags**

Wherever possible, attempt to capture information about customers and identify potential vulnerability.

- **Reassessing vulnerability**

Ensure that vulnerable customers' internal records are updated to indicate that special attention is required.

Suppliers were assessed on their performance against each objective in three areas:

- Understanding - An understanding of the process was gathered by conducting system and process walkthroughs and reviews of existing policy and procedural documents.
- Testing - Sample testing of customer accounts was performed across each of the key areas outlined above.
- Reporting -We collated our findings and areas of good practice within a report which was presented to each member for their review and management comments.

The auditors

PwC audit the Safety Net. This is the third year PwC has carried out the audit.

Appendix one

Classifications

Report classification	Rating	Points	Commentary
Gold medal	Excellent	4 points or less	Supplier has been audited and is fully compliant with the Safety Net code.
Silver medal	Good	5 – 14 points	Supplier had at least one area of the Safety Net which was compliant with actions or had a number of areas that were compliant with minor issues.
Bronze medal	Needs Improvement	15 – 29 points	Supplier could not prove compliance in one area of the Safety Net or had a number of areas that were compliant with actions.
Unsatisfactory	Unsatisfactory	30 points and over	Supplier could not prove compliance in 2 or more areas of the Safety Net or had a number of areas with persistent non-compliance or that were compliant with actions.
