

# Electricity Switching – April 2020

## Nearly half a million switch despite lockdown

Energy UK’s latest electricity switching figures – published today – reveal that nearly half a million customers (472,538) moved to a new supplier in April. This is a 29% decrease compared to April 2019 when a record breaking number of customers switched supplier (668,371).

The latest figures bring the total number of switches to just over two million so far this year - 2% lower when compared to the same period last year.

### Audrey Gallacher, Energy UK’s interim chief executive, said:

“It is certainly not surprising to see that switching energy supplier is not a top priority for most people while they are getting to grips with lockdown life.

“However, as many of us might be looking at ways to save on our energy bills, as well as checking you are on the right deal for you, it is also important to consider energy efficiency measures, especially if you are working from home and might have extra time on your hands.

“Simple steps such as installing energy efficient light bulbs and turning off lights when you are not using them or minor DIY tasks such as draught proofing doors and windows can help you reduce the energy you use and save on your bill.”

### Notes for editors:

- ▶ To see the latest monthly switching stats, please visit [Energy UK’s website](#).
- ▶ The rise in switching figures over last few years has been as follows:

- ▶ Larger suppliers in the market consist of British Gas, EDF Energy, E.ON (including npower), OVO (including domestic business of SSE) and Scottish Power. This reflects recent mergers, with the domestic side of SSE now considered under OVO and npower under E.ON. This means that any switches between the merged parties are considered as internal and are not counted in our switching statistics which only reflect external switches. The non-domestic business of SSE is now considered a small and mid-tier supplier.
- ▶ The switching data is now supplied by Gemserv (starting from September 2018). Gemserv Limited is the service company contracted by the MRA Service Company (MRASCo) to provide services in support of the MRA including the management of its governance and providing specialised expertise to MRASCo in support of the growing electricity retail market. Historical data up to August 2018 was provided by Electralink.
- ▶ The data referenced in these reports is for electricity only. These figures include both domestic (Profile Classes 1 and 2) & non-domestic customers (Profile Classes 3-8 and 0) but do not include customers transferred to another supplier as a result of the Supplier of Last Resort process (SOLR).
- ▶ These figures do not include internal electricity switching. Such statistics can be found on the [Ofgem website](#).

## Change of Supply Event

A 'Change of Supply Event' is the industry term for describing when a domestic or non-domestic customer switches from one supplier to another. The total number of electricity switches in April was 472,538.

### Total number of switches

## Movement between supplier groups

In April 2020, of all switches:

- ▶ **35%** were from larger to small and mid-tier suppliers
- ▶ **15%** were from small and mid-tier to larger suppliers
- ▶ **28%** were between larger suppliers
- ▶ **22%** were between small and mid-tier suppliers

### Movement between small and mid-tier and larger suppliers

Larger suppliers in the market include British Gas, EDF Energy, E.ON (including npower), OVO (including the domestic business of SSE) and Scottish Power. Small and mid-tier suppliers consist of all the other suppliers who are licensed by Ofgem to supply electricity.

## Gains by small and mid-tier suppliers

In April the net gain\* by small and mid-tier suppliers was 93,923 or 20% of all switches.

\*Net gain is the number of switches from larger to small and mid-tier suppliers minus the number of switches from small and mid-tier to larger suppliers.

### A breakdown of all switches

Month Year	Larger to small and mid-tier suppliers	Small and mid-tier to larger suppliers	Larger to larger suppliers	Small and mid-tier to small and mid-tier suppliers	Total switches
